Your Personalized BeniSave Options Report

FICTIONAL CLIENT EXAMPLE | TYLER

LOCATION	AGE / HOUSEHOLD	CARE BUDGET	MAIN NEEDS
North Carolina, ZIP 28115	27; one person; leaving parent plan	$250 per month for care	Occasional primary care; mental-health support

Your starting comparison

Compare pay-as-needed virtual care with an ongoing virtual primary-care membership. Add therapy at the frequency you want; request a local in-person cash quote as your backup.

Neither routine-care route limits what you could owe for emergency care, hospitalization, surgery or specialist treatment. Compare available comprehensive coverage separately before changing existing coverage.

Two paths to investigate first

• Path A - Pay as needed: start with a supported one-time Amazon One Medical Direct Message encounter; keep a more involved virtual-visit option and an in-person clinic in reserve.

• Path B - Ongoing virtual care: investigate Curai Health if continuous text-based primary-care access matters enough to pay every month.

Therapy is a separate layer in either path. No prescription, dental, vision or other add-on was selected for Tyler because this fictional profile did not request one.

Your $69 report includes the $29 BeniSave Affordable Healthcare Options Guide. This report narrows your starting choices; the guide contains the broader resource directory, price-call scripts and comparison worksheets.

Educational comparison, not insurance, medical or financial advice. This fictional example uses illustrative service frequency and previously researched starting prices, not a quote or a recommendation for a real person.

2. Test your budget and care frequency

Tyler gave a $250 monthly care budget. The actual fit depends on therapy frequency, occasional visits and charges outside the selected service.

THERAPY FREQUENCY	THERAPY AT $75	WITH CURAI AT $29/MO	COMPARED WITH $250/MO
1 session each month	$75	$104	Below budget before other care
2 sessions each month	$150	$179	Below budget before other care
3 sessions each month	$225	$254	Above budget before other care
4 sessions each month	$300	$329	Above budget before other care

What changes the answer

• The pay-as-needed example assumes three eligible $29 encounters in a year. More visits or different conditions change its cost.

• The $75 therapy price was attached to one North Carolina clinician listing in the research workbook. Availability, suitability and current price must be confirmed before booking.

• A monthly membership is worthwhile only if its access and included services suit you. Compare text-only, video and in-person care by scope as well as price.

• Labs, medicines, outside referrals and any separately billed care can push total spending above the examples.

No invented hospital-bill estimate: this report does not assign a hypothetical emergency price or claim a measurable coverage gap. Routine-care services shown here do not cap hospital or emergency bills. Review available coverage and its actual terms independently.

Use the included guide

The price-call script on page 8 and the printable comparison worksheet on page 17 help you get written, comparable quotes. Pages 53-54 link to FAIR Health Consumer, MDsave, New Choice Health and Turquoise Health when you need to research a specific service.
